Magnetic nanoparticles could aid heat dissipation

Thermal conductivity coefficient of water: 0.56 W/m K
Magnetic nanoparticles could aid heat dissipation

Thermal conductivity coefficient of water: 0.56 W/m K
Magnetic nanoparticles could aid heat dissipation

Thermal conductivity coefficient of water: 0.56 W/m K

Thermal conductivity coefficient of magnetite (Fe$_3$O$_4$): ~1 W/m K

When magnetite nanoparticles are added (called nanofluid), no difference found in the heat dissipation rate.
Magnetic nanoparticles could aid heat dissipation

Thermal conductivity coefficient of water: 0.56 W/m K

Thermal conductivity coefficient of magnetite ($\text{Fe}_3\text{O}_4$): ~1 W/m K

When a magnet is placed outside of the tube, what will happen?
Chain-like connections
(1) Higher thermal conductivity of magnetite as well as (2) the increase contact surfaces.
